Implement Client Script & UI Policy (Incident) — Task 5

Task 6: Testing the Configuration

Activity 1: Test Mandatory Enforcement

1. **Navigate to Incident:**

Go to Incident → Create New to open a new Incident form.

2. **Set the Impact Field:**

Select **High** for the **Impact** field. This will trigger the UI Policy and Client Script behaviors you configured earlier.

3. **Leave Assigned To Empty:**

Do not fill in the **Assigned To** field. This will test the onSubmit Client Script that prevents saving if Assigned To is missing.

4. **Click Submit:**

Attempt to save the Incident record.

5. **Verify the Result:**

• The Incident should **not be saved** because Assigned To is required when Impact is High.

• An **error message** should appear, indicating that the Assigned To field cannot be empty.

• Confirm that all UI Policy actions, such as read-only fields or automated urgency updates, are working as expected.

Activity 2: Test Successful Save

1. **Fill the Assigned To Field:**

Open the Incident form and select a user in the **Assigned To** field. This ensures the onSubmit Client Script condition is satisfied.

2. **Click Submit:**

Attempt to save the Incident record.

3. **Verify the Result:**

• The Incident should be **saved successfully** without any errors.

• Confirm that all other configured behaviors, such as:

• **Urgency auto-setting** (from the onChange Client Script)

• **Read-only fields** (from the UI Policy Action)

• **State restrictions** (from the onCellEdit Client Script)

are functioning as expected

Activity 3: Reverse Condition Test

1. **Open an Existing Incident:**

Go to Incident → Open and select an Incident where **Impact** is currently set to **High**.

2. **Change Impact:**

Update the **Impact** field from **High** to **Medium**. This will test the **Reverse if false** functionality of your UI Policy and the behavior of your Client Scripts.

3. **Verify the Field Behavior:**

• **Assigned To** should no longer be mandatory.

• **Urgency** should now be editable, meaning the read-only UI Policy action is reversed.

4. **Save the Record:**

Click **Submit** to save the changes. The record should save successfully without errors, confirming that the reverse condition works as intended.

Activity 4: Test List Edit Blocking

1. **Navigate to the Incident List:**

Go to Incident → All to view all Incident records in a list view.

2. **Attempt a List Edit:**

• Locate any Incident in the list.

• **Double-click the State field** to try editing it directly from the list.

3. **Verify the Behavior:**

• An **alert message** should appear, indicating that direct changes to the State field are not allowed.

• The **State value should remain unchanged**, confirming that the onCellEdit Client Script is working correctly.

Activity 5: Test Form-Based Update

1. **Open the Incident Record:**

Navigate to the same Incident record you used in previous tests.

2. **Change the State:**

On the **Incident form**, update the **State** field to a new value. This tests that changes via the form (not the list) are allowed.

3. **Click Update:**

Save the record by clicking **Update**.

4. **Verify the Result:**

• The **State change should be saved successfully**.

• Confirm that other fields, such as **Assigned To** and **Urgency**, still follow the configured UI Policy and Client Script rules.

Conclusion

The Implement Client Script & UI Policy (Incident) micro project effectively demonstrates how **UI Policies** and **Client Scripts** can work together to enforce dynamic field behavior, automate updates, and prevent incorrect data submission on Incident forms. By using onChange, onSubmit, and onCellEdit scripts alongside UI Policy actions, the project ensures fields like **Assigned To** and **Urgency** respond appropriately to changes in **Impact**, maintaining clean and consistent data. This solution not only enforces mandatory fields and controls user interactions but also remains lightweight, efficient, and easy to implement, making it ideal for short-duration micro projects while showcasing practical best practices for improving form usability and data integrity in ServiceNow.
